FROMMELT® RainGuard™ RG-3000 Header Seal

RainGuard header tightly seals the top of the trailer, blocking water without restricting access

- Get maximum sealing efficiency
- Protect personnel and property
- Eliminate product and property damage
- Improve comfort and productivity
- Increase loading dock safety
- Retrofit a variety of existing seal and shelter designs

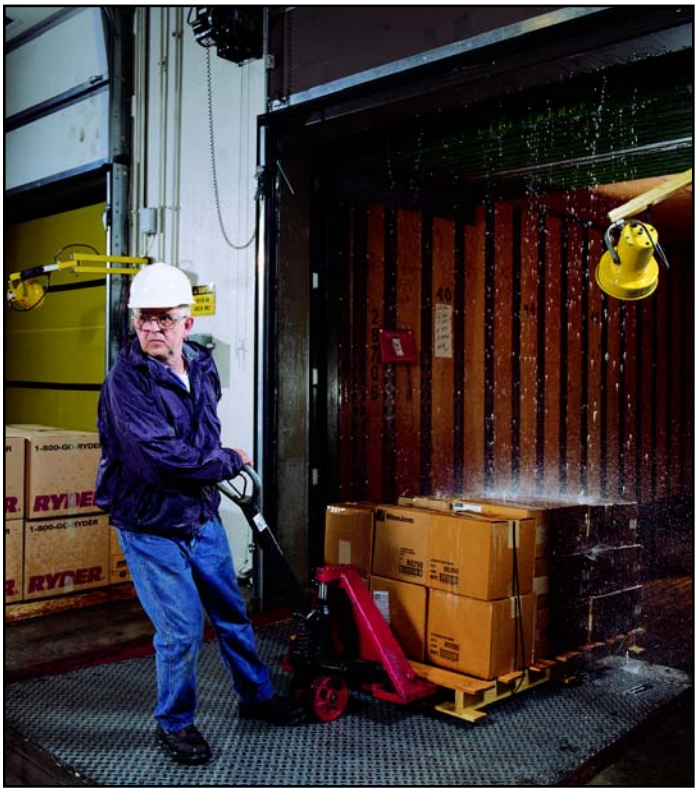
Keep bad weather outside, improve safety and productivity inside, with the remarkable RainGuard header seal.

Protect your products, personnel and productivity against the elements with the Frommelt® RainGuard™ header seal from Rite-Hite. The unique design of the RainGuard RG-3000 delivers the highest sealing efficiency at the trailer top against rain, snow, sleet and wind. And that means a safer, more comfortable, more productive work environment at your dock.

RITE-HITE®

Here's how RainGuard protects your productivity and profits.

The Problem:



While ordinary header seals provide some protection against rain, they typically allow water into the dock area, especially with a declined approach.

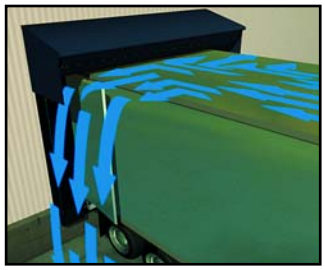
The Solution:

The RainGuard RG-3000 header seal gives your dock the best protection, providing a safer, more productive environment.

Poor seals can mean wet, icy floors and levelers – hazardous to personnel and equipment.

Inadequate seals can cause water damage and product contamination.

Ordinary head curtains cannot prevent "Funnel Effect" when trailers approach down a decline during rain.



RainGuard blocks the water out front before it becomes a problem.

Get all the advantages of RainGuard at your dock.

The latest RainGuard RG-3000 design delivers a whole new level of protection to your dock. Advanced technology gives the RG-3000 higher durability and better sealing efficiency than any other rain diverting seal available. A tight, consistent seal across the full width of the trailer top, plus built-in protection against damage and wear, make the RainGuard RG-3000 your best guaranteed value. Products, people and equipment stay dry with the rugged RainGuard RG-3000.

RainGuard header seals offer more.

Most efficient seal possible across the top of the trailer.

Widest coverage range available (15") to seal variety of trailer heights, typically 12'3" to 13'6".

Automatic positioning ensures optimum efficiency. No manual activation required.

Pivoting canopy header prevents damage to header and seal if trailer comes in higher than expected.

Full, unrestricted trailer height access from inside the dock allows maximum productivity.

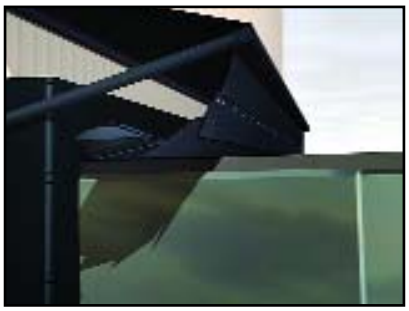
Simple design means easy installation and no maintenance.

Weighted, cylindrical sealing member provides consistent, uniform pressure across full width of trailer top.

Flexible front sweep design accommodates taller trailers without damage to unit.

Layered Neotec™ front plates can take thousands of trailer impacts.

Automatic positioning.



RainGuard RG-3000 adjusts automatically to the proper height as the trailer backs in, creating a tight, consistent seal across the full width of the trailer top. Effectively seals short and tall trailers alike.

Protect your existing dock with a RainGuard retrofit.

Improve your work environment.
RainGuard RG-3000 provides the industry's most advanced design to divert rain, sleet and snow, and provide safer, more comfortable and more productive conditions.

Compatible with most seals and shelters.
The RainGuard RG-3000 header seal is designed to work with virtually any existing equipment. So you can quickly upgrade your dock.

RainGuard fits almost all situations.

When space limitations or base unit size present challenges, the RG-3000 can be configured to fit the situation. A smaller projection RainGuard still delivers 11" of coverage range and the ability to seal a wide variety of trailer heights.

Designed to withstand harsh conditions.

RainGuard's unique canopy header is built and tested to withstand extra heavy snow loads. Even in the toughest environments, RainGuard holds up.

Contact your Rite-Hite Representative for more details about the revolutionary RainGuard header seal. It's the ultimate in weather protection. And that can mean more productivity and profits for you.
